To us, investing in innovation means creating value for the industry, improving the competitiveness of our Clients and capturing new markets. That's why, since its creation, Braskem has invested regularly in research and new technologies to offer its Clients innovative and sustainable solutions that help improve people's lives.

This commitment to sustainable innovation enabled us to bring to market green polyethylene, which is made from sugarcane ethanol, a bio-based resource that absorbs CO₂ from the atmosphere as it grows.

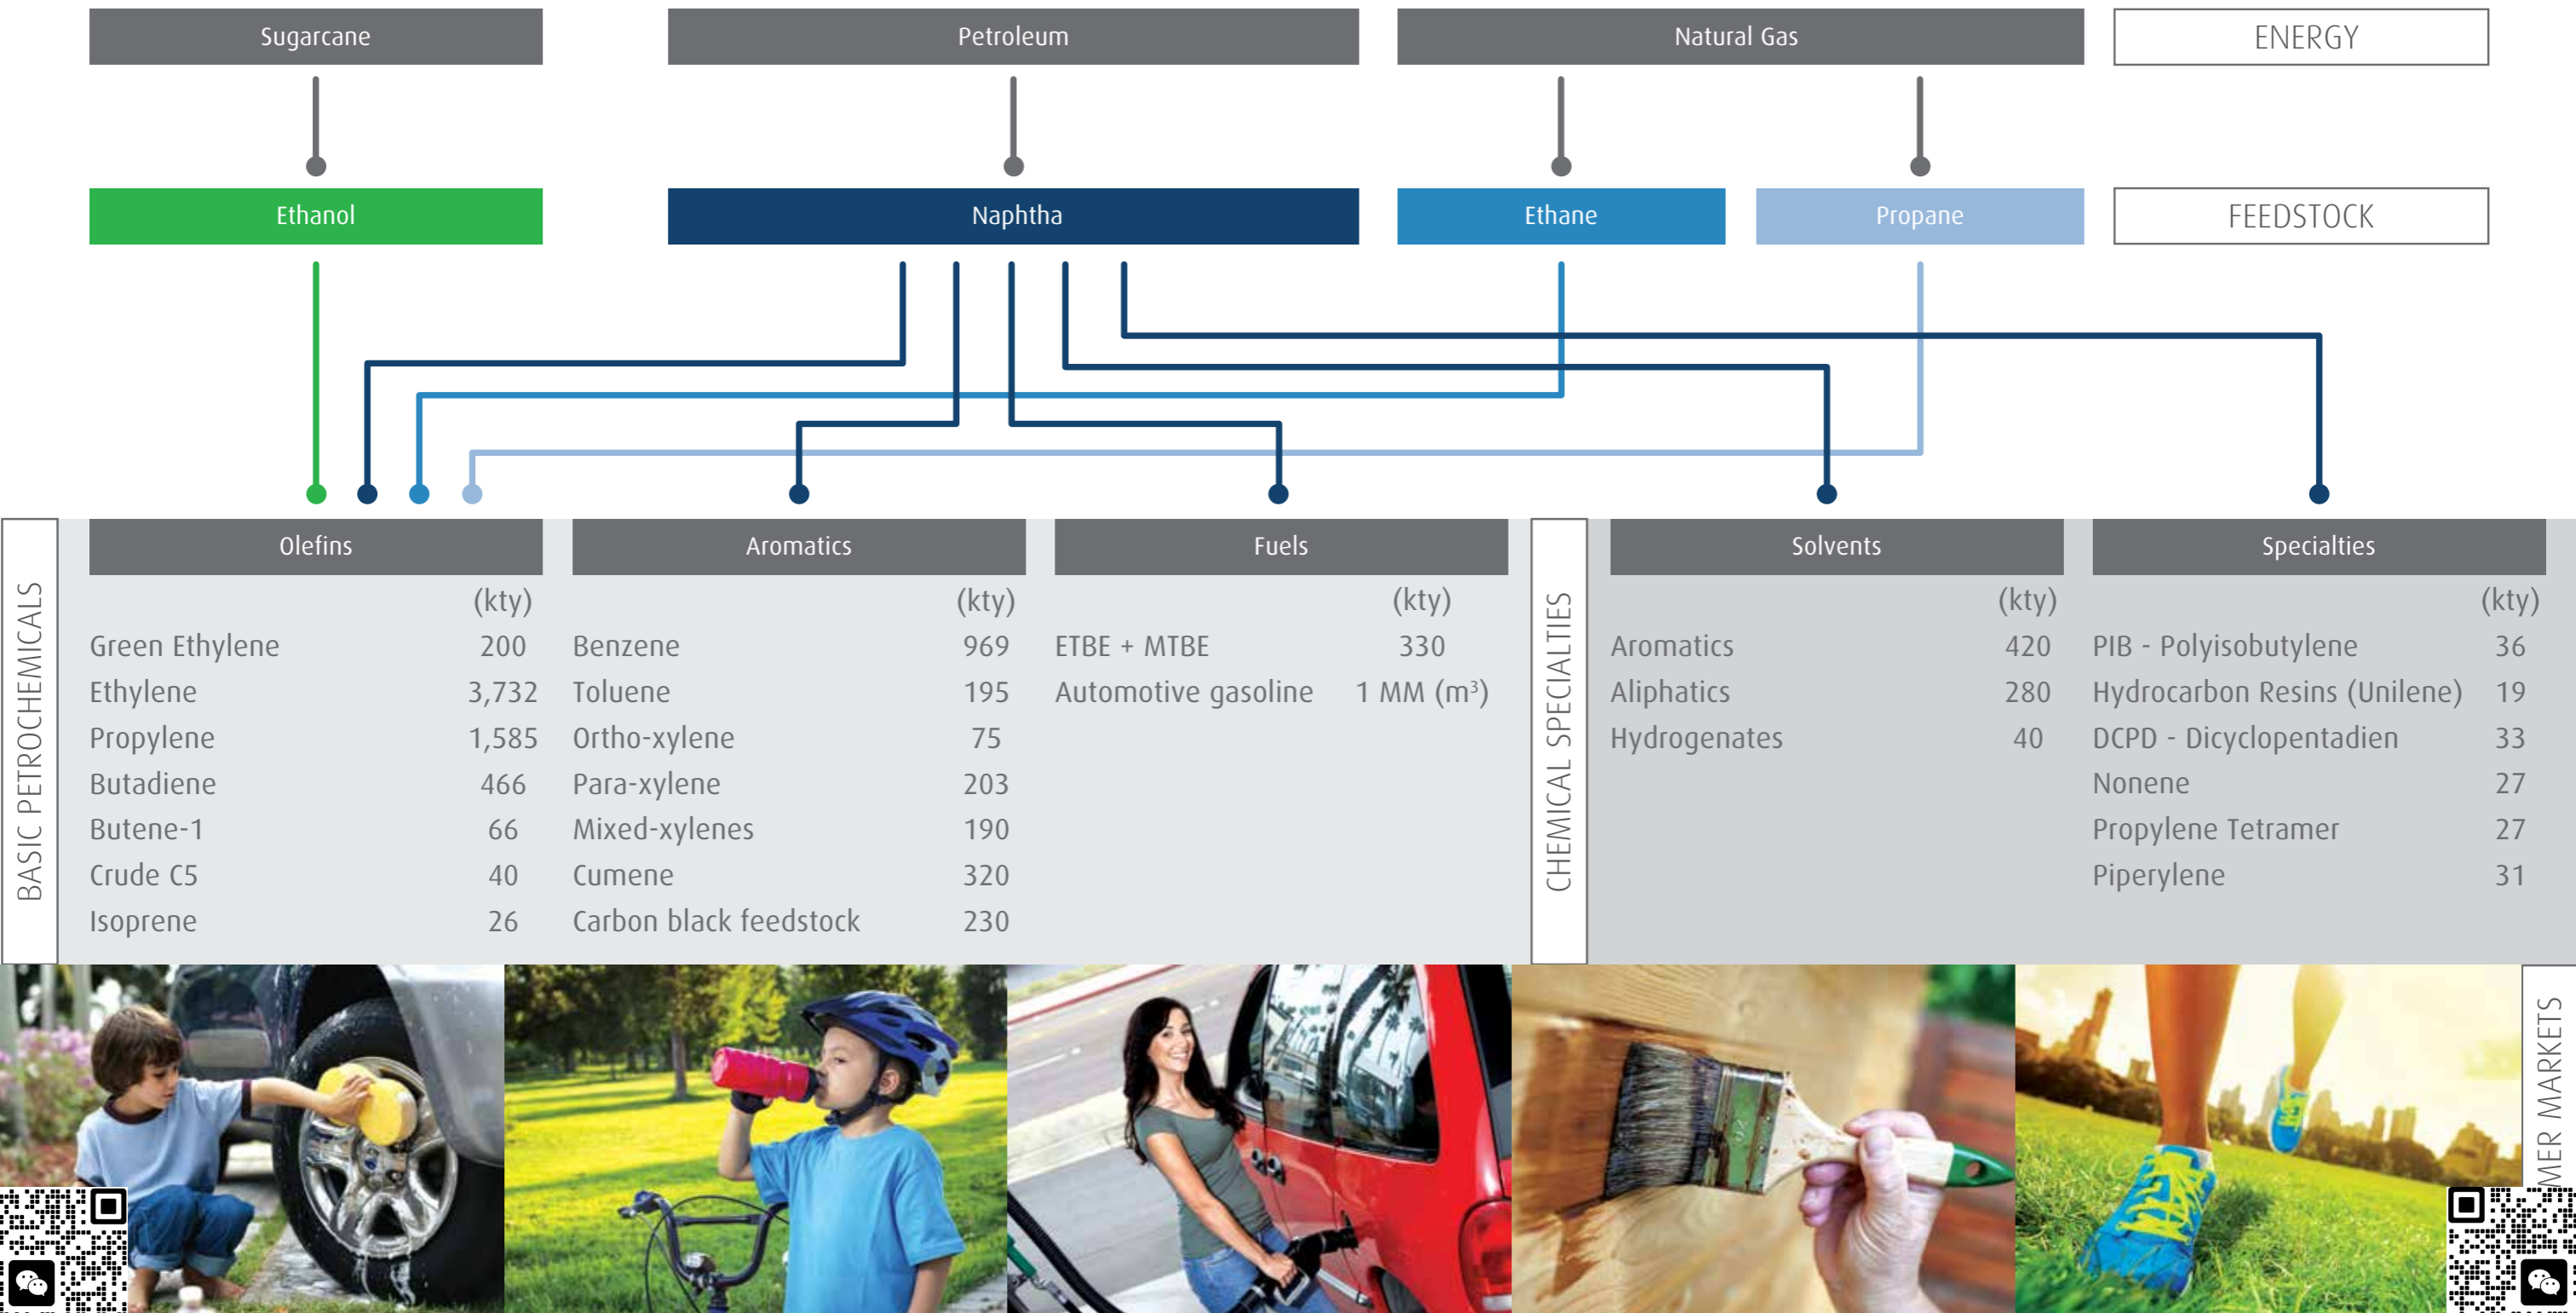

Braskem

Consistent delivery of results: track record of organic growth and acquisitions

Chemistry in people's lives. Discover the Basic Petrochemicals Unit
