Petrothene NA940000

Low Density Polyethylene

Product Description

Petrothene NA940000 is a low density homopolymer resin selected by customers for use in heavy duty film and blow molding applications. Excellent puncture resistance combined with impact properties make NA940000 an excellent choice when selected by customers for bags used to package fertilizer, peat moss, decorative stone and agricultural and construction materials. Typical blow molding applications include flexible containers, squeeze bottles and toys. Excellent toughness, good clarity and processibility are key attributes of NA940000. NA940000 also has excellent heat shrink properties.
