

Petrothene

# NA952

Low Density Polyethylene

Film Extrusion Grade

Melt Index: 2.0 Density: 0.919

## Applications

*Petrothene* NA952 is a series of homopolymer resins selected by customers for use in industrial and consumer packaging as well as liner and bag applications. NA952 has an excellent balance of processability, toughness and drawdown.

## Regulatory Status

The base resin NA952 meets the requirements of the Food and Drug Administration regulation, 21 CFR 177.1520. This regulation allows the use of this olefin polymer "... in articles or components of articles intended for use in contact with food..." Specific limitations or conditions of use may apply. Contact your Equistar product safety representative for more information.

## Processing Techniques

Specific recommendations for processing NA952 can be made only when the end use applications, required properties and processing equipment are known.
