Calorific Value: 8000 - 11000 kcal/kg
Fight fire from safe distance with hose lines or monitor nozzles.
Heat from fire may melt, decompose polymer, and generate flammable vapors.
Move containers from fire area if it can be done without risk.
Evacuate immediately in the event of opening of storage container pressure relief devices or discoloration of container.
Always stay away from tanks engulfed in fire.
Do not attempt to get on top of storage containers involved in fire.

Equip emergency responders with proper personal protective equipment (PPE)
 Avoid generating dust.
 Avoid dispersal of dust in the air (i.e., clearing dust surfaces with compressed air).
 Potential combustible dust hazard.
 Polymer particles create slipping hazard on hard smooth surfaces.

6.2 Environmental precautions

Environmental precautions : Do not flush into surface water or sanitary sewer system.

6.3 Methods and materials for containment and cleaning up

Methods for containment / : On land, sweep/shovel into suitable disposal containers or
 Methods for cleaning up vacuum using equipment which avoids ignition risk.
 On water, material is insoluble; collect and contain as any solid.
 All recovered material should be packaged, labeled, transported and disposed of or reclaimed in conformance with applicable laws and regulations and in conformance with good engineering practices. Reclaim where possible.

7. Handling and storage

7.1 Precautions for safe handling

Advice on safe handling : Material is in a pellet form.
 If converted to small particles during further processing, handling, or by other means, may form combustible dust concentrations in air.
 Avoid dust accumulation in enclosed space.
 Avoid generating dust; fine dust suspended in air and in the presence of an ignition source is a potential dust explosion hazard.
 Static discharge (spark), or other ignition sources, in high dust environments may ignite the dust and result in a dust explosion
 Electrostatic charge may build during conveying or handling. Equipment handling polymer should be conductive and grounded (earthed) and bonded.
 Metal containers involved in the transfer of this material

should be grounded and bonded.
 All electrical equipment should conform to applicable electric codes and regulatory requirements for areas handling combustible dusts.
 After handling, always wash hands thoroughly with soap and water.
 When bringing the material to processing temperatures vapors may develop may condense in the exhaust ventilation. See section 10.

Fire-fighting class : Polymer will burn but does not easily ignite.

7.2 Conditions for safe storage, including any incompatibilities

Requirements for storage areas and containers : Store in a dry location.
 Use good housekeeping practices during storage, transferring and handling. Process enclosures and adequate ventilation should be used to avoid excessive dust accumulation.
 Store away from excessive heat and away from strong oxidizing agents.
 Keep container closed to prevent contamination.

Materials that can be formed when handling this product: Non-specified (inert or nuisance) dust		TWA	3 mg/m3 respirable	US (ACGIH) 2005	

Consult local authorities for acceptable exposure limits.

8.2 Exposure controls

Engineering measures

Follow the recommendations in international standard NFPA 654 (as amended and adopted) for equipment used to handle this product.

Engineering controls, i.e. enclosed systems, should be used whenever feasible to maintain exposures below acceptable criteria. When such controls are not feasible, or sufficient to achieve full conformance, other engineering controls such as local exhaust ventilation should be used.

Ensure that dust-handling systems (such as exhaust ducts, dust collectors, vessels, and processing equipment) are designed in a manner to prevent the escape of dust into the work area (i.e., there is no leakage from the equipment).

Personal protective equipment

Respiratory protection : Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits.
 When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.
 Use appropriate respiratory protection where atmosphere exceeds recommended limits.
 Where workers could be exposed to dust concentrations above the exposure limit they must use appropriate certified respirators.

Hand protection : Wear gloves that provide thermal protection where there is a potential for contact with heated material.
